

SETUP GUIDE

Get your cube to know you

Auddi.ai uses the fingerprint scanner built into the top touchscreen to make sure only you can run agents on your computer. Enrollment takes about two minutes.

Step by step

STEP 01

Power on and connect

Plug Auddi into your computer with the included USB-C cable. The cube boots in about 30 seconds and the top touchscreen lights up with the welcome prompt.

STEP 02

Create the owner profile

Tap the screen and sign in with your Auddi.ai account. The first person to sign in becomes the owner and can add or remove other users later.

STEP 03

Enroll your fingerprint

Go to Settings > Security > Fingerprint. Lift and rest your finger on the scanner at the center of the touchscreen. Repeat 3-5 times so the sensor captures the edges of your print.

STEP 04

Verify the enrollment

Tap the lock icon on the home screen. The cube will ask you to scan your finger. When the ring turns white and the lock opens, your fingerprint is ready.

STEP 05

Lock the cube by default

In Settings > Security, turn on Lock on sleep. Now the cube requires your fingerprint after every idle period or whenever it is unplugged and reconnected.

Security tips

Multiple fingerprints

You can enroll up to five prints per user. Add a second finger in case one is dry or bandaged.

Shared devices

Invite team members from Settings > Users. Each person enrolls their own fingerprint and only their own workflows are visible to them.

No data leaves the cube

Fingerprint templates are stored locally inside the secure enclave. They are never uploaded to the cloud or shared with apps.

Security & privacy

How touch verification works

When you tap the scanner, the cube reads the ridges of your fingerprint and converts them into an encrypted mathematical template. That template is matched against the enrolled prints stored inside the cube's secure enclave. If they match, the lock opens and the home screen appears. The raw image of your fingerprint is never saved.

What data is stored for your cube

The cloud only keeps your cube's serial number, nickname, and pairing status so the app can show which devices belong to you. Fingerprint templates, voice prints, and any files you process stay on the cube itself. We do not have access to your biometric data and cannot unlock your device remotely.

Troubleshooting

The scan keeps failing

Clean the scanner with a dry cloth and make sure your finger is not wet. Re-enroll the print from Settings > Security > Fingerprint.

Can't scan at all

Choose "Can't scan?" on the lock screen to receive a 6-digit backup code at your Auddi.ai account email. Codes expire after 10 minutes.

Cube lost or stolen

Sign in at auddi.ai/devices and use "Lost or stolen" to revoke the cube. The serial is blocklisted and a fresh pairing session opens for the replacement.

Need a hand?
